

Winchester Business Systems

BUSINESS CHALLENGE:

Enterprise information boundaries have disappeared as corporations have opened their networks to allow external access to internal systems. In today's competitive environment, the need to provide network, system and application security is essential. AtSignOn™ software enables e-business by controlling access to corporate networks, Domino-based Web applications and operating systems.

Combined with RSA SecurID® two-factor authentication, AtSignOn provides the additional level of protection for those Domino based organizations who are dealing with sensitive data, require multiple levels of authentication, governed by Compliance regulations, or who have remote employees.

SOLUTION DESCRIPTION

The AtSignOn application provides an additional level of security and authentication for IBM Lotus Domino resources and applications. When AtSignOn protection is enabled on a Web server, users who attempt to view protected resources are prompted to enter an RSA SecurID PASSCODE. If valid, the user is given access. If not valid, the user is denied access. If successful, the RSA Authentication Manager tells the Domino server the identity of the user, the Domino server will trust these credentials, and allows access to the system with the permissions of the authenticated user. AtSignOn is a DSAPI dll function that will intercept any HTTP requests made to the Domino server and redirect that request to the RSA Authentication Manager for authentication.

ABOUT WINCHESTER BUSINESS SYSTEMS

Established in 1989, Winchester Business Systems, Inc., a premiere IBM business partner, is a leader in providing software applications and implementation services to Fortune 1000 companies worldwide. The Company delivers custom-tailored software and professional consulting based on the Lotus Domino and IBM e-business technology with a focus on the Life Sciences Market and on compliance with ER/ES, Part 11. For more information, please visit www.wbsnet.com.

SOLUTION BENEFITS

- Two-factor authentication within Domino environment
- Protects all Domino web based application including Mail, calendar and address books
- Secures the replication of iNotes/DOLS data to the server
- Provides support for Single Sign-On
- Establishes timeout and cookies for repeated access control
- Complies with 21 CFR Part 11 and other regulations
- Integrated with ComPac GxP for regulatory compliance
- Installs directly on Domino Server — no additional software on client
- Support for Domino Release 5 and Release 6

WINCHESTER BUSINESS SYSTEMS AND RSA SECURITY: AN RSA SECURED INTEROPERABLE SOLUTION

RSA Security has configured and tested Winchester's AtSignOn to seamlessly interoperate with RSA SecurID two-factor authentication. A detailed implementation guide is available to provide step-by-step configuration instructions to set up RSA SecurID with Winchester's AtSignOn solution.

The RSA SecurID Ready AtSignOn implementation guide is available from www.rsasecured.com.

ABOUT RSA SECURITY INC.

With thousands of customers around the globe, RSA Security provides interoperable solutions for establishing online identities, access rights and privileges for people, applications and devices. Built to work seamlessly and transparently in complex environments, the Company's comprehensive portfolio of identity and access management solutions — including authentication, Web access management and developer solutions — is designed to allow customers to confidently exploit new technologies for competitive advantage. RSA Security's strong reputation is built on its history of ingenuity and leadership, proven technologies and long-standing relationships with more than 1,000 technology partners.
