

On-Demand SMS Tokencodes for RSA SecurID®

Delivering secure authentication via SMS

tyntec is a global partner of RSA and enables the delivery of SMS tokens for SecurID.

The RSA Authentication Manager can be configured to include tyntec's Mobile Outbound SMS services, which delivers on-demand tokencodes. Used as an alternative to hardware authenticators, authentication via SMS is secure, user-friendly and easy-to-integrate.

Key features:

Global Reach: access to 850+ operators, covering over 90% of mobile phone numbers, worldwide.

Easy to integrate: SMS fits seamlessly into existing systems. Our infrastructure is scalable, fast and reliable, guaranteeing our customers quality and secure transmission of their SMS traffic.

Guaranteed 15 second delivery: our exacting Enterprise-grade SLAs (Service Level Agreements) assure that tokencodes will reach an end-user handset within 15 seconds.

Real-time visibility: experience end-to-end control and transparency over the entire SMS transmission path including handset sourced delivery receipts (DLRs).

Limited-time viability: tokencodes are viable for a limited duration and automatically expire if not redeemed in that time. Our "time-to-live" feature ensures unverified passcodes are not sent re-currently.

Excellent end-user experience: SMS is an intuitive and user-friendly communication method which is available to virtually every mobile device, anytime—anywhere in the world.

Tech Specs – API

- ◆ Massive and high-speed throughput
- ◆ Interfaces: HTTP and HTTPS
- ◆ Technical availability: 99.7% on a six month basis
- ◆ Connection: IP (VPN on request)
- ◆ SMS time-to-expiration can be customized
- ◆ Technical support: 24/7/365
- ◆ [See online documentation](#)
