

RSA® IDENTITY GOVERNANCE & LIFECYCLE

RAPID APPLICATION ON-BOARDING USING SECURIENCE DATA MANAGER

AT-A-GLANCE:

Securience Data Manager, a simple to use powerful add-on to RSA Identity Governance & Lifecycle, which has been developed to reduce implementation time and cost. This solution follows RSA's recommended practices.

Why?

- Significantly reduce the effort for on-boarding new applications
- Improve Collection Frequency
- Enhanced flexibility around collection methods
- Automatically insert business context around application access

What?

- Securience Data Manager automates and manages the full data integration process to all applications

How?

- Purpose built data management platform
- Extensive set of connectors and tools via a simple UI
- Business Application Mapping allows mapping of resources from multi-application platforms
- Generated templates can be imported into RSA IG&L

SUPPORTED VERSIONS*

This has been validated to work on:

- RSA IGL v7x

**Please always check and confirm, as this solution may have been updated since this was created*

OVERVIEW:

As the size and scope of your enterprise IAM solution matures, the number of applications to manage also grows. Many on-boarding actions can be streamlined and made more efficient.

Securience Data Manager was developed to tackle this problem. Not only does it significantly increase the performance of the collection process but it also notably reduces the effort required to add new applications to your IAM environment.

Using Data Manager to organise your collected data into Business Applications, user access reviews are completed more accurately and efficiently, whilst requesting access becomes easier to the end users.

The Securience Data Manager rapid on-boarding framework builds a repeatable and fast on-boarding process that can continue to support your future IAM growth.

Migration from your existing RSA IG&L environment to a cleaner environment using Securience Data Manager is simple. Securience can very quickly and easily migrate your entire collection process to being managed in Securience Data Manager.

KEY FEATURES & BENEFITS:

This implementation blueprint provides the following benefits:

- Significant reduction in effort to on-board applications
- Huge performance improvement to collection process for environments with 50+ applications
- Support for advanced collection methods such as via SOAP/REST web APIs, SSH collections and local windows server collections means less customizations/scripts
- Map collected data to Business Applications allows multi-application platforms to be correctly managed within RSA IGL
