RSA NetWitness Platform

Event Source Log Configuration Guide

Fortinet Manager / FortiAnalyzer

Last Modified: Thursday, September 19, 2019

Event Source Product Information:

Vendor: Fortinet
Event Source: Fortinet Manager and Fortinet FortiAnalyzer
Versions: 5.x, 6.x

Note: RSA is qualifying support for the major version. In case of any configuration changes or logs not parsing in a minor version, please open a case and we will add support for it.

RSA Product Information:

Supported On: NetWitness Platform 10.0 and later
Event Source Log Parser: fortinetmgr
Collection Method: Syslog
Event Source Class.Subclass: Security.Firewall

To configure the Fortinet Manager or FortiAnalyzer event source, you must:

- Configure Syslog Output on Fortinet Manager or FortiAnalyzer
- Configure NetWitness Platform for Syslog Collection

Configure Fortinet Manager or FortiAnalyzer

To configure Fortinet Manager or FortiAnalyzer to send logs to RSA NetWitness Platform:

1. Open the command line interface and enter the Fortinet Manager credentials.
2. Enter the following string:

   ```
   config system locallog syslogd setting
   ```

3. Set server to the IP address of the RSA NetWitness Log Decoder or Remote Log Collector:

   ```
   set server "LD/RLC IP address"
   ```

   where ***LD/RLC IP address*** is the IP address of the RSA NetWitness Log Decoder or Remote Log Collector.

4. Set severity to either **warning** or **information**:

   ```
   set severity warning
   ```

   ```
   set severity information
   ```

   > **Note:** Set the severity to **warning** to receive warning messages. Informational messages are also supported.

5. Set status to **enable**:

   ```
   set status enable
   ```

6. End the command line process:

   ```
   end
   ```

Configure NetWitness Platform

Perform the following steps in RSA NetWitness Platform:

- Ensure the required parser is enabled
- Configure Syslog Collection

Ensure the Required Parser is Enabled

If you do not see your parser in the list while performing this procedure, you need to download it in RSA NetWitness Platform Live.

Ensure that the parser for your event source is enabled:

1. In the **NetWitness** menu, select **ADMIN** > **Services**.
2. In the Services grid, select a Log Decoder, and from the Actions menu, choose **View** > **Config**.
3. In the Service Parsers Configuration panel, search for your event source, and ensure that the **Config Value** field for your event source is selected.

Note: The required parser is **fortinetmgr**.

Configure Syslog Collection

Note: You only need to configure Syslog collection the first time that you set up an event source that uses Syslog to send its output to NetWitness.

You should configure either the Log Decoder or the Remote Log Collector for Syslog. You do not need to configure both.

To configure the Log Decoder for Syslog collection:

1. In the **NetWitness** menu, select **ADMIN** > **Services**.
2. In the Services grid, select a Log Decoder, and from the Actions menu, choose **View** > **System**.
3. Depending on the icon you see, do one of the following:

- If you see 

, click the icon to start capturing Syslog.
- If you see 
, you do not need to do anything; this Log Decoder is already capturing Syslog.

To configure the Remote Log Collector for Syslog collection:

1. In the **NetWitness** menu, select **ADMIN** > **Services**.
2. In the Services grid, select a Remote Log Collector, and from the Actions menu, choose **View** > **Config** > **Event Sources**.
3. Select **Syslog/Config** from the drop-down menu.

   The Event Categories panel displays the Syslog event sources that are configured, if any.
4. In the Event Categories panel toolbar, click +.

   The Available Event Source Types dialog is displayed.
5. Select either **syslog-tcp** or **syslog-udp**. You can set up either or both, depending on the needs of your organization.
6. Select the new type in the Event Categories panel and click + in the Sources panel toolbar.

   The Add Source dialog is displayed.
7. Enter **514** for the port, and select **Enabled**. Optionally, configure any of the Advanced parameters as necessary.

   Click **OK** to accept your changes and close the dialog box.

After you configure one or both syslog types, the Log Decoder or Remote Log Collector collects those types of messages from all available event sources. So, you can continue to add Syslog event sources to your system without needing to do any further configuration in NetWitness.
