Issue #2

rsa.identity.ps.global.mailbox@rsa.com

Latest RSA IGL Version:

V7.1.1 (New release!!)

RSA IGL V7.1

V7.1 Patch 5

Note: v7.0.(x) is EOL in Aug 2019. [Details here](#)

Featured IGL Recommended Practice: Sizing Guidelines

When implementing RSA Identity Governance & Lifecycle (RSA IGL) one of the first questions you might ask is; **“what do I need from an infrastructure perspective?”**. The number of CPU’s, the memory size, do we need remote or local database, do we need a cluster setup, etc? There are many questions and lots of options.

Also, you might be an **existing RSA IGL customer**, but things have changed over time (or are going to change), such as: more identities have been added, more people are using the system, addition of using roles, implemented automated JML, etc. Then you might ask: “What is the impact of this on my infrastructure and how do we update this to keep up with our demands?”

For these questions **RSA has created an infrastructure sizing sheet**, which will help to answer the above questions. RSA can work with you in determining what the sizing of your infrastructure should look like and how to plan for future success.

For more information and to work with someone from the PS team on this, please contact: rsa.identity.ps.global.mailbox@rsa.com

How does it help me? Quickly and easily update various objectives, which are normally changed manually.

RSA IGL Success Wire - [Automotive Company](#)

A large automaker reduces data retention and access risks with RSA IGL. This customer, with over 30k employees and an RSA customer for over 10 years is successfully using RSA IGL to help them with various IAM processes, including provisioning and de-provisioning for their Access Management needs.

RSA Identity Integrated Solutions: [RSA IGL & Archer Identity Management](#)

This Implementation Blueprint brings RSA Archer into the enterprise wide management and monitoring of identities, leveraging RSA Identity Governance and Lifecycle (RSA G&L) to reduce the risk with RSA Archer and provide a simple business interface for RSA Archer access. The solution includes packaged up review certifications and frameworks to help manage Segregations of Duties within RSA Archer. More info on this blueprint and all it can do, is found [here](#). **Want to know More?** Contact [Jamie & Balaji](#) to setup a call today!

** RSA Support - Quick Tips **

Attaching artifacts while opening support cases greatly expedite troubleshooting/workaround/Resolution of Support cases.

RSA Announces availability of RSA Identity Governance and Lifecycle v7.1.1

RSA is proud to announce the availability of the RSA Identity Governance and Lifecycle version 7.1.1 release. RSA Identity Governance and Lifecycle provides organizations the ability to act with insight to reduce identity-based risks and drive informed security decisions. RSA Identity Governance and Lifecycle simplifies how access is governed and streamlines access requests and fulfilment to deliver continuous assurance of compliance by automating the management of user entitlements throughout the user’s lifecycle.

RSA Education - RSA IGL Course Summary

Did you know that we have some fantastic courses available, to help you learn more about the products you have purchased?!

- ⇒ **RSA Identity Governance and Lifecycle Administration – Governance:** This NEW 3-day administrative course covers collection, visibility, certification, and reporting within IGL. Scenarios that demonstrate quick business decisions and automated Access Certification Reviews are also included.
- ⇒ **RSA Identity Governance and Lifecycle Administration – Lifecycle:** This NEW 4-day administrative course covers the ARM, AFX, BRM, and Rules modules. Students will learn how to automate provisioning and new user registration processes, and will create workflows, notifications, and several types of change requests.
- ⇒ **RSA Identity Governance and Lifecycle Administration:** This is the last opportunity to take the original 4-day class that includes an overview of each module and covers common configuration settings and administrative tasks. The two new courses mentioned above are replacing this 4-day version. Note: Until recorded versions of the new courses are completed, *we do still have an on-demand classroom version of this course available.*

To register for any of the courses above, please visit us at <https://community.rsa.com/community/training/securid>, or work directly with your account manager

Upcoming RSA Identity Governance & Lifecycle Training Courses

Training Course Name	Theatre	Start Date	End Date	Delivery Location
RSA Identity Governance and Lifecycle Administration	EMEA	4/30/2019	5/3/2019	EMEA - Glasgow, UK - DELL Office
RSA Identity Governance and Lifecycle Administration II - Lifecycle	Americas	4/29/2019	5/2/2019	Americas - Bedford, MA - RSA Office
RSA Identity Governance and Lifecycle Administration I – Governance	Americas	08/04/2019	10/04/2019	Online - RSA Americas

RSA Featured Blueprint - DataReach

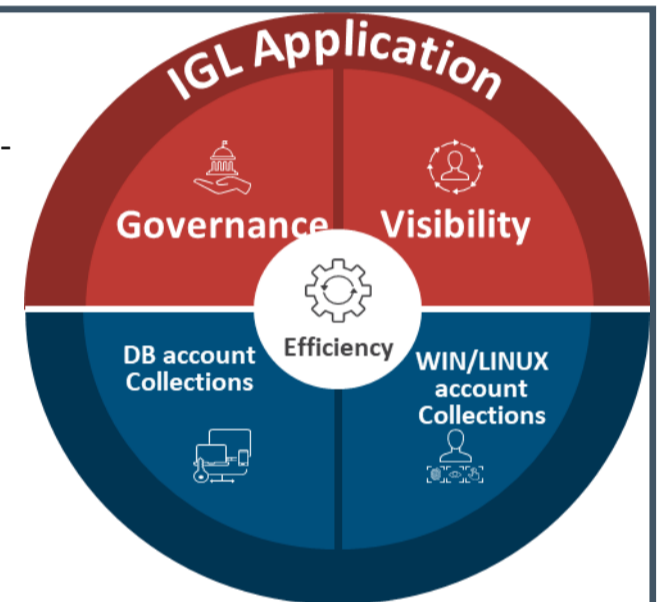

RSA Professional Services (PS) has created DataReach. A simple, scalable solution for governing and provisioning many databases, Windows & UNIX endpoints at scale. This blueprint works on all RSA product version and comes with CAS (Custom Application Support)

What does Datareach do?

- ⇒ Reduce application risk, save time and provide a simple interface within RSA IGL
- ⇒ Provide visibility into local admin access for Database, UNIX and Windows hosts
- ⇒ Enable organizations to govern access for large scale database, Windows & UNIX environments, quickly and easily, all within RSA IGL.
- ⇒ Supplements IGL to effectively collect from and provision to a multitude of hosts

Benefits of Datareach

- * Audit Administrative permissions / accounts for multiple Database, Windows or UNIX servers and provide a Governance framework for these accounts.
- * Integration with PAM and CMDB solutions for host information and credentials
- * Handles endpoint connectivity failures and alerts administrators through email / ServiceNow tickets when necessary
- * Ability to collect Windows and UNIX accounts plus groups, to provide visibility and governance
- * Helps identify Orphan accounts and build remediation plan to address this risk.
- * Access Reviews for Sensitive Administrative Access.
- * Easy and Secure integration with RSA Identity Governance and Lifecycle product.

Check out the implementation blueprint today - [Click here](#) and contact your sales lead for more information.

Function	DataReach	DAG/Stealthbits
Collects user access such as local accounts & groups for Windows & UNIX	✓	✓ Yes with a license upgrade
Provisioning	✓	✗
Collection of local accesses from large number of databases	✓	✗ Only SQL Server DB
Collect unstructured data like file shares and SharePoint access	✗	✓

Final thoughts and comments.....

- ⇒ Don't forget to check out all the great new features in v7.1.1, you will details (with images and videos) for each major new item, from this [link](#).
- ⇒ RSA Charge is coming up later this year, we would love to see you there! More info here and let us know if you are coming, as we can offer 1hour free consultancy to any clients attending in person. <https://www.rsa.com/en-us/events/rsa-charge-2019>
- ⇒ Don't forget.....RSA IGL v7.0.x will go End Of Life (EOL) in August 2019, more info found [here](#). We wanted to ensure everyone is aware of this date and can start planning their upgrade to v7.1.x. If you need any support or assistance with doing this, please let us know. Note, we have a great recommended practice available on doing upgrades, which can be found [here](#), this is a comprehensive guide with all you need to know for doing a successful upgrade/migration.
