** RSA IGL - Dec 2020 Webinar Recording **

In December we closed the year out with some updates around the EOPS of v7.1x, the release of the 12 Dashboards of Christmas and a great partner demo too! Click [here](#) to watch back.

(note: you need to be logged in to watch this video)

→→ Next Webinar: Jan 27th - Register today! ←←

Our next RSA IGL webinar includes updates from the RSA PS team and a demo on the RSA Password Reset solution.

Register today: [click me](#)

**** The 12 Dashboards of Christmas ****

During December, we released a total of **79** (!) different reports, charts and dashboards. These are all available to download today, to help you understand more about your RSA IGL deployment and make things easier for both the business and administration teams. We hope these add a lot of value to your existing deployment.

Each of the dashboard items have been fully documented with clear and simple steps to follow, so even if you have never created a chart/dashboard before, you will be able to now. We would love to hear from you on these, so please share your comments and screen shots on the community.

News & Updates

A summary of the key items related to RSA Identity Governance and Lifecycle in the past month.

RSA REMINDER: **[V7.1x EOPS](#)**

RSA continues to provide our customers with great features, community-driven enhancements, new solution capabilities, performance improvements, product updates and general fixes for our RSA Identity Governance and Lifecycle product offering. Customers can take advantage of these qualities by making sure their deployments are up-to-date and running the latest product version, found here: [RSA Identity Governance & Lifecycle 7.2.1](#)

RSA would like to remind customers who are using a **7.1.x version of RSA Identity Governance and Lifecycle** that it will reach **End of Primary Support (EOPS) in March 2021** – please refer to the [Product Version Life Cycle for RSA Identity Governance and Lifecycle](#) page for additional details.

The full EOPS advisory can be found here: [click me](#)

POLL: **[Browser Version](#)**

What browser does your company use for RSA IGL?

We are looking to understand more about what browsers you are using within your organisation, in both the near and long-term. This feedback helps us with moving the product forward as we maintain the current technology and potentially stop/limit supporting older technology.

One key thing we are looking at, is if Internet Explorer (IE) 11 is something you rely on still, or not? Our incoming support cases show that very few people use this browser still, with just 1 case in 2020 against IE11.

Please can you take one minute to complete this poll: [click me](#)

[New Community Section:](#) **[101 Guides](#)**

To help ensure our customers & partners understand some key areas of RSA IGL and how things work overall, we have created a new RSA Link Category: "101 Guides"

This new category will help to group together all the 101 documents/blogs we have written, so they are easy to find.

This is shown on the "RSA IGL Recipes" community page, found here: [click me](#)

The latest editions to these guides are "v7.2x Telemetry Data" and "Dynamic Charts/Reports"

For more information and to see what is available today: [click me](#)

[21 Predictions for 2021](#)

2020 may be over, but organizations will continue to feel its impact in 2021, when plans and decisions will be profoundly influenced by the challenging events of the past year.

Unprecedented changes in how we work, play and connect aren't going away anytime soon. We'll continue to work from home, do more shopping online and stream much of our entertainment, to varying degrees.

These shifts will continue to affect how organizations handle identity and access management, threat detection and response, fraud prevention, and risk management in 2021 and beyond.

What can you expect in 2021? To find out more: [click me](#)
