

RSA Identity Governance and Lifecycle 7.2.0 Patch 08 Release Notes

Functional Changes

Issue	Description
Collections,Connectors SF-01697371 ACM-109133	<p>OAuth 2.0 access token retrieval failed for endpoints which mandate the client authentication using Authorization Header. A custom flag "custom.OauthUseAuthHeaderForClientAuth" has been introduced.</p> <p>To generate OAuth token using Request body, the custom flag should be "false" (default). The token requests have the credentials sent in the request body in this case (client ID, client secret).</p> <p>To generate an OAuth token using Auth header, the custom flag should be "true". The token requests use Authorization header to send client credentials (client ID, client secret).</p> <p>The custom flag is globally used for all OAuth configurations across the application.</p>
Agent SF-01608646 ACM-105658	<p>Certificate validation was always done on host name. We now provide a way in the UI through custom setting 'DomainNames' where the customer can input comma separated domain name(s), which will be considered for certificate validation.</p>
Request Forms SF-01566326 ACM-106805	<p>The URL prefix for the Request Form validation URL is now formed based on user custom setting "UseURLPrefixFromRequest".</p> <p>When set to true, the URL prefix is constructed from the current application's request URL. Otherwise, it fetches it from the Request Configuration setting (old behavior).</p> <p>If "UseURLPrefixFromRequest" is set to true, the user can add another custom setting 'URLPrefixPortNumber' to configure the port number of the application. If configured, this port number is used to form the URL prefix. Otherwise, the port number is fetched from the application's request URL.</p>

Fixed Issues

Access Certification

Issue	Description
SF-01622140 ACM-106387	Differentiated entity and attribute by displaying apps in (Resource_Type,Application) for Entity : Business Source, and apps.name in value for Attribute name (application).
SF-01690051 ACM-109017	Old review comments were appended to the new one when updating review items via webservice.
SF-01718630 ACM-109317	Filtering on integer values with less than, greater than, and other conditions gave wrong results in Review results.
SF-01664800 ACM-107930	Slowness in the By Monitor tab for User Access review.
SF-01733580 ACM-109532	Review Definition: View All Aveksa Entitlement gave excessive authorization to users.

Access Requests

Issue	Description
SF-01681103 ACM-108776	Form used in the manual fulfillment node did not reflect changes.

Admin, Log

Issue	Description
SF-01713910 ACM-109223	The calendar did not open when the icon was clicked because the application created the Calendar object before the Calendar plugin completely loaded. Now the application waits for the Calendar plugin to load before accessing it.

AFX

Issue	Description
SF-01699911 ACM-109134	AFX gave LDAP exception if the DN contained parenthesis.

Archive Purge

Issue	Description
SF-01726692 ACM-109396	Data_Purging_Pkg running indefinitely in step "Purge_Custom_Tasks" is handled.

Change Requests and Workflows

Issue	Description
SF-01703524 ACM-109118	Webservice Create Change Request for Add Access errored out with misleading Remove Access message.
SF-01709657 ACM-109172	A check for valueAppld attribute has been added in case a value present is missing.
SF-01689668 ACM-108587	For the REST node, when there is a 'space' in the variable used in the URL, spaces are now substituted with %20 in the URL.
SF-01689670 ACM-108588	Users were not able to act on approvals and activities using web services from a workflow. Workflow admin user was used to act on approvals and activities for this scenario. Fixed the issue by allowing workflow admin user to act on approvals and activities using web services.
SF-01679616 ACM-108691	Revert Changes workflow incorrectly called out-of-the-box Manual Activities workflow for fulfillment.

Database Management

Issue	Description
ACM-108931	The OEM database performance monitoring is set to NONE. Contact RSA Support for guidance on monitoring performance, if required.

Data Collection, Processing and Management

Issue	Description
SF-01652047 ACM-108727	DuplicateNameException: Application Role already exists when create Pending Applicate Role is handled.
SF-01722535 ACM-109388	Indirect Relationship Processing failure for all collectors with ORA-00054 is handled.

Documentation - Product

Issue	Description
SF-01666427 ACM-108349	Documentation issue in the IG&L UI: Updated the attribute name in userAttributeChange webservice description.

Descriptions, Role Management

Issue	Description
SF-01677099 ACM-109100	Role Description import duplicates are handled.

Reviews

Issue	Description
SF-01719800 ACM-109316	Review Items did not load properly when you changed the grouping among different pages. Reset the current page number if the new grouping is not the same as current grouping.

Request Forms

Issue	Description
SF-01660499 ACM-109047	Form date field did not get populated in CR for provisioning field when the user executed the request form in run mode. It did work properly when the user executed the form in debug mode.

Role Management

Issue	Description
SF-01703587 ACM-109209	When creating a CR from the Roles > Actions > "Commit Changes to Roles" and selecting multiple roles, rejecting a create role item leaves the role in a "Committed" instead of a "New" state.
SF-01545104 ACM-103488	Revert Option has been enabled for deleted local roles with custom flag in place to allow the existing behavior.

Rule Management

Issue	Description
SF-01684756 ACM-108490	Violation Exceptions performed from a Violation Remediation review failed with error "ORA-30926: unable to get a stable set of rows in the source tables" and left the violation in an open state.
SF-01545104 ACM-108794	A CR was not generated from Termination Rule if the display name of the custom attribute in the entitlement condition is used for other entitlement types.

System Reports

Issue	Description
SF-01718076 ACM-109255	ASR failed to generate with ORA-31061: XDB error: special char to escaped char conversion failed.

UI

Issue	Description
SF-01731776 ACM-109507	You were previously not able to see the name change in the Business Source for Multi app EDCs, when you renamed "Locality" to "Application Resolution" in the strings.properties file. Made changes to pick list of options from strings.properties file for MAEDC and Multi Role Set Role Collector as similar to that of MAADC.
