

# RSA Identity Governance and Lifecycle 7.2.1 Patch 04 Release Notes

## Functional Changes

Issue	Description
<b>Request Forms</b>  SF-01566326 ACM-106805	The URL prefix for Request Form validation URL is now formed based on user custom setting "UseURLPrefixFromRequest". If this is set to true, the URL prefix is constructed from the current application's request URL. Otherwise, the prefix is fetched from the Request Configuration setting (existing behavior). If "UseURLPrefixFromRequest" is set to true, you can add another custom setting 'URLPrefixPortNumber' to configure the port number of applications. If the setting is configured, then this port number is used to form URLprefix. Otherwise the port number is fetched from the application's request URL.
<b>Request Forms</b>  SF- 01716556 ACM-109517	Introduced a custom setting "AllowSelectionOfIndirectItemsInRequestForms". When set to "true", this setting switches the Request forms functionality to make indirects entitlements selectable. By default, the custom setting "AllowSelectionOfIndirectItemsInRequestForms" is set to false.

## Fixed Issues

### Access Certification

Issue	Description
SF-01664800 ACM-107930	Corrected slowness in the By Monitor tab for User Access review.
SF-01733580 ACM-109532	Review Definition: View All Aveksa Entitlement gave users excessive authorization.
SF-01741548 ACM-109722	Application crashed while editing a Violation Remediation review associated with many rules.

## Access Requests

Issue	Description
SF-01716556 ACM-109281	Required selection on entitlement table was not done on indirect entitlements and prevented forms to be move forward.
SF-01681103 ACM-108776	Form used in the manual fulfillment node was not reflecting that changes were handled.

## AFX

Issue	Description
SF-01699911 ACM-109134	AFX giving LDAP exception when the DN contained parenthesis is now handled.

## Archive Purge

Issue	Description
SF-01726692 ACM-109396	Data_Purging_Pkg ran indefinitely in step "Purge_Custom_Tasks".

## Change Requests and Workflows

Issue	Description
SF-01689668 ACM-108587	REST node did not have URL encode variables used as Request Parameters and had an encoding problem whenever there was a 'space' in the variable used in the URL. This caused java.lang.IllegalArgumentException in the logs. For Example, 'This is my comment' fails but 'Thisismycomment' worked as expected. Spaces are now encoded with %20 in the URL.
SF-01689670 ACM-108588	User could not act on approvals and activities using web services from workflows.
SF-01679616 ACM-108691	Revert Changes workflow incorrectly called out-of-the-box Manual Activities workflow for fulfillment.
ACM-108053	Group owner (other Asset owner) was included as part of Asset Business owner approval workflow. Fixed the issue by excluding Other Asset Owners from Asset Business Owner Approval, Asset Technical Owner Approval and Asset Violation Manager Approval workflows and created a new

	dynamic resource called Asset Owner as a separate option for group owner approval.
SF-01732374 ACM-109518	Activity got automatically completed by system and not assigned to default resources when no resources were included when using Technical Approval node.

#### Data Collection, Processing and Management

Issue	Description
SF-01652047 ACM-108727	Getting com.aveksa.server.core.DuplicateNameException: Application Role existed while creating Pending Applicate Role.
SF-01722535 ACM-109388	Indirect Relationship Processing failed for all collectors with ORA-00054.
SF-01732951 ACM-109600	Database SQL CASE statements in collector definition caused warning of invalid mapping.

#### Database Management

Issue	Description
SF- 01688950 ACM-108719	Database Statistics running multiple times per day during collection is now handled.

#### Installation Error

Issue	Description
SF-01744418 ACM-109788	"Encountered unexpected return code 255 when determining Oracle version" error while doing a fresh installation of 7.2.1.

#### Log Artifact Collection

Issue	Description
SF-01459161, SF-01537239, SF-01562025, SF-01601875, SF-01656415 ACM-102914	Log Artifact Generate feature did not work on WebSphere.

## Migration

Issue	Description
ACM-109418	Error ORA-01031 during update to 7.2.1 P02 is addressed.

## Request Forms

Issue	Description
SF-01660499 ACM-109047	Form date field was not populated in the CR for provisioning field when the user executed the request form in run mode.
SF-01715475 ACM-109278	Form restrictions were skipped by direct link.
SF-01685292 ACM-109569	Form failed to display users when "Changes apply to:" filter contains a value with single quotes.

## Reviews

Issue	Description
SF-01719800 ACM-109316	Review Items did not load properly while changing the grouping among different pages. Reset the current page number if the new grouping is not same as the current grouping.
SF-01724253 ACM-109466	"Maintain with Expiration" did not work in multi-step reviews.

## Role Management

Issue	Description
SF-01545104 ACM-103488	Revert Option is enabled for the deleted local roles with custom flag in place to allow the existing behavior.

## Rules

Issue	Description
SF-01732769 ACM-109515	Rule failing with error ORA-54017 is addressed.
SF-01684756 ACM-108490	Violation Exceptions performed from Violation Remediation review failed with error "ORA-30926: unable to get a stable set of rows in the source tables" and caused violation to be in open state only.
SF-01545104 ACM-108794	CR was not generated from Termination Rule if display name of custom attribute present in entitlement condition was used for other entitlement types.

## Security

Issue	Description
SF-01726656 ACM-109567	Reviewers with user review and account review were getting "Insufficient privileges to view page" when the reviewer clicked Perform of a second review, after the first review was completely delegated.

## UI

Issue	Description
SF-01731776 ACM-109507	<p>You could not see the name change on Business Source for Multi app EDCs, when renaming "Locality" to "Application Resolution" in the strings.properties file.</p> <p>Made changes to pick the list of options from strings.properties file for MAEDC and Multi Role Set Role Collector as similar to that of MAADC.</p>
