

# RSA Identity Governance and Lifecycle 7.5 Patch 07 Release Notes

## What's New

The following sections describe the new features and improvements in version 7.5.0 P07

Feature	What's New
<b>Security</b> ACM-111825 ACM-111027 ACM-112386 ACM-112693	Older versions of the BSAFE crypto library were using expired certified jars signed by an untrusted vendor (SUN Microsystem) which was flagged by the IBM WebSphere platform. As a fix, the BSAFE crypto was upgraded and moved to the 6.2.5.0.2 patch. <b>Note:</b> The minimum system requirement for IBM WebSphere is IBM JDK 1.8.0_281 or later.
<b>ACM Security</b> ACM-113233	The G&L application migrates to RSA-certified custom log4j libraries. The log4j library is built over apache log4j 1.2.17v and removes some of the recently discovered vulnerable files to ensure no exploit can be done using them.

## Functional Changes

Feature	What's New
<b>Password Management</b> ACM-113315	The Password Synchronization is enhanced to include custom user attributes in the user mapping attribute drop-down and to fetch user data for password synchronization.
<b>Change Request and Workflow</b> ACM-113072	Account Entitlements are cached during the CR generation instead of querying the DB each time for different Entitlements that the accounts have.

## Fixed Issues

### Access Requests

Issue	Description
SF-02320562 ACM-113586	This is a high-impact issue affecting approvals and activities in the change requests. For details, refer to the advisory at <a href="https://community.securid.com/t5/securid-governance-lifecycle/urgent-securid-governance-and-lifecycle-product-advisory-request/ta-p/676850">https://community.securid.com/t5/securid-governance-lifecycle/urgent-securid-governance-and-lifecycle-product-advisory-request/ta-p/676850</a>

SF-01779333 ACM-111759	The technical role part of the Business Role was shown to the user, even after removing the user from the business role. During the role explosion, only the users directly entitled to Business Role were marked for delete. Any technical role associated with the user through the business role was left as it is. This resulted in showing the technical role on the user access page.
---------------------------	---

### Admin Errors

Issue	Description
SF-02267708 ACM-112634	Admin Error Notification Rule was sending admin errors even if it was not from the error source.

### AFX

Issue	Description
SF-02266979 ACM-112944	SOAP Type connectors was throwing "java.lang.NoClassDefFoundError: org/apache/cxf/ws/policy/AssertionInfoMap" error.
SF-02275839 ACM-112740	All AFX workflows did not work as expected. The AFX workflows had looping issues.

### Change Request and Workflow

Issue	Description
SF-01806957, 01819390, 02271413 ACM-111658	Change requests were getting stuck when removing a user from the nested group. Removed the groups which were provisioned through nested groups causing Change Request to get stuck.
SF-01804263 ACM-111617	Users got stuck on "Leave of Absence" (LOA) status and were unable to move from LOA to available status. This issue is fixed with a script update.
SF-02287762 ACM-113309	"Upload Attachment" was no longer available for a Requester in the change request detail page from 7.5.0 onwards.
SF-02271835 ACM-112787	The optional Email display name was required and caused issues with some clients. This is fixed by defining the Email display name as optional.
SF-02327535 ACM-113728	The 7.5.0 P05 upgrade issue. When multiple requests exited the approval stage and reached their fulfillment phase, the "Invalid Empty List of Change Items Returned" error appeared. The issue is fixed.
SF-01810505 ACM-111764	Multiple Account Resolution Policy check and change request created in backend check was missing in case of Remove operations involving multiple accounts. Added the same.

### Collector

Issue	Description
SF-02316988 ACM-113520	Temporary files not removed from agent-transaction-data after failed collection
SF-02254936 ACM-112421	Group Owner Resolution was case-sensitive in Account Collectors.

SF-02294089 ACM-113202	REST IDC collecting data improperly as data from the endpoint has an empty value or null at the parent hierarchy is not collect correct data from the endpoint.
SF-02277547 ACM-112784	Duplicate users created from the same REST IDC. This issue is fixed by removing the duplicates.

### Data Collection Processing and Management

Issue	Description
SF-02304079 ACM-113255	After upgrading to 7.5.0 P02, the Indirect Relationship Processing was slower.

### Email

Issue	Description
SF-01830515 ACM-112695	The OOO emails received as "Reply could not be understood", instead of "Out of Office". This is fixed.

### Platform

Issue	Description
SF-02297160 ACM-113125	JDK version upgraded from 1.8.0_212 to 1.8.0_312. As a fix added upgrade JDK tar which can be used to upgrade JDK to 312.

### Roles

Issue	Description
SF-02027714 ACM-112174	Suggestions and Violations were not appearing while creating a role before applying changes.
SF-01757350 ACM-111503	CR was taking time when there were too many items to generate a change request.

### Security

Issue	Description
SF- 02313143 ACM- 113500	Clickjacking protection in IGL is fixed.

### UI

Issue	Description
SF-02306915 ACM-113300	All calendars across the IGL application does not appear when the user switched to the Swedish locale. This issue occurs because of few invalid characters (") exist in Swedish translation.

## Platform Matrix

The latest application server and JDK version have been certified for this release.

	<b>RSA Identity Governance and Lifecycle Hardware Appliance</b>	<b>RSA Identity Governance and Lifecycle Software Bundle</b>	<b>Software Only (WebLogic or WebSphere)</b>	<b>Container</b>
<b>Application Server Version</b>				
WildFly 21.0.1 Included	Qualified	Qualified	n/a	Qualified
WebLogic 14.1.1.0	n/a	n/a	Qualified	n/a
WebSphere 9.0.5.10	n/a	n/a	Qualified	n/a
<b>JDK Version Certified</b>				
AdoptOpenJDK 1.8.0_312	Qualified	Qualified	n/a	n/a
Oracle JDK1.8.0_311 (WebLogic)	n/a	n/a	Qualified	n/a
IBM JDK 1.8.0_311 (WebSphere)	n/a	n/a	Qualified	n/a
AdoptOpenJDK 11	n/a	n/a	n/a	n/a
