

# RSA Identity Governance and Lifecycle 7.5 Patch 08 Release Notes

## Fixed Issues

### Access Requests

Issue	Description
SF-02318451 ACM-113725	When users have the access to same Technical Role/Global Role from multiple Business Roles, removing the TR/GR from one of the BR results in removing the TR/GR from the users though the users still have the TR/GR access from the other BR's.

### Account Management

Issue	Description
SF-02320419 ACM-113583	Technical/Business Owner of an application Couldn't edit Groups, but he is able to edit App Roles & Entitlements.

### ACM Security

Issue	Description
SF-01820065 ACM-111857	Default files for Apache Tomcat, an embedded component of AFX, show up in a vulnerability report.

### Attribute Sync

Issue	Description
SF-02346145 ACM-114255	The customer has 2 attribute sync requests, "request# 1" and "request# 2".  When the 2nd request is triggered "Attribute sync request for changing account's email".  The affected user is not tagged in the CR, and the request is stuck in the pending action state.

### Authentication

Issue	Description
SF-02313277 ACM-113467	Authentications sources not in ordered on the login page.

### Change Request and Workflow

Issue	Description
SF-01806957, 01819390, 02271413	Change requests getting stuck when removing user from nested group.

ACM-111658	
SF-02327535 ACM-113728	The 7.5.0 P05 upgrade issue. When multiple requests exited the approval stage and reached their fulfillment phase, the "Invalid Empty List of Change Items Returned" error appeared.
SF-02261111 ACM-112569	Filtering indirect change items if 'Include Indirect Entitlements' in Approval Workflow is 'false' when grouping on category, while calculating the number of categories to handle and sets runtime data about the categories to be used in the split instances.
SF-02326043 ACM-113722	When Multiple users are configured under Resources section in approval WF, we iterate through all the configured users (Work items) and print the Approver details who Rejected the CR in each iteration. Fix has been made to print the Approver details without duplicating irrespective of the number of users (Work items) configured.
SF-02320562 ACM-113586  SF-02334059 ACM-113958	This is a high-impact issue affecting approvals and activities in the change requests. For details, refer to the advisory at <a href="https://community.securid.com/t5/secuid-governance-lifecycle/urgent-secuid-governance-and-lifecycle-product-advisory-request/ta-p/676850">https://community.securid.com/t5/secuid-governance-lifecycle/urgent-secuid-governance-and-lifecycle-product-advisory-request/ta-p/676850</a>
SF-02319529 ACM-113547	Tabbed style UI was introduced in V7.5.0 for change request detail page introduced approvals and activities tab but permission for this page restricted to Edit permission.
SF-02316902 ACM-113515  SF-02316902 ACM-113514	Users who are Approvers (Supervisor, Supervisor-Delegate, Application Owner) encounter an error when they click on the hyperlink in the Change Request column of Approvals which are assigned to them. After they see the insufficient privilege and click back option and go back to the main page the perform button gets disabled and when we refresh the page, the perform button gets enabled.
SF-02295433 ACM-113129	Approvals display workflow data after data purging.
SF-02294084 ACM-113115	Once we create a workflow and rename the Fulfillment node, the fulfillment sub processes of the particular change request is reflected under the Approval Section and there is no fulfillment section present for that change request.
SF-02284071 ACM-112945	The 'show job level variable' check's works fine for the current wf variable but when the wf node tries to get the job variable for parent workflow that returns the variable even after show job level variable is unchecked. Added the block of code to verify the 'show job level variable' checked or unchecked for parent wf & based on that it will return the job variable.
SF-02270904 ACM-112870	The fulfilment Phase is calling out of path fulfilment phase workflow.
SF-02273046 ACM-112636	When users have the access to same Technical Role/Global Role from multiple Business Roles, removing the TR/GR from one of the BR results in removing the TR/GR from the users though the users still have the TR/GR access from the other BR's.
SF-02261111 ACM-112596	Filtering indirect change items if 'Include Indirect Entitlements' in Approval Workflow is 'false' when grouping on category, while calculating the number of categories to handle and sets runtime data about the categories to be used in the split instances.

SF-02270419 ACM-112562	Customer receives an error when creating a change request to terminate the user using webservice.
SF-02266598 ACM-112514	The requests pending Technical Approval was showing WF stall error when the stall detection Job runs. excluded 'Technical Approval' like 'Supervisor approval' with this change. Now the WF stall error will not pick requests waiting for Technical Approvals
SF-02266581 ACM-112513	ChangeRequestId is no longer part of ChangeRequest's 'Name' field generated after rules processing.
SF-02251569 ACM-112340	When a user is added to a role shared accounts gets added to the group as well.
SF-02250049 ACM-112304	The customer is having some users get confused with the generated response email generated from the link for both Approve and Reject. There is a typo with no space at the end of the sentence, see "line.Add" in image below. They would like this email to be customizable but from what I see this is not in customer strings or elsewhere. Based on what I'm seeing most of what they want cannot be accommodated since this is just a simple text-based email generated from an action link.
SF-01828538 ACM-112018	Attaching files to a request can cause SQL nodes in workflows to not do their jobs and does not reflect the right CR state.

### Data Collection Processing and Management

Issue	Description
SF-02348574 ACM-114217	The customer receives an error when trying to get accounts data.  In a Non-Prod environment, collectors (Data Source Type: Database) getting failed due to “Could not get accounts data: Caused by com.aveksa.common.DataReadException: Could not read data from the resultset. Caused by java.sql.SQLException: <b>Non-supported character set (add orai18n.jar in your classpath): WE8ISO8859P9”</b> .
SF-02318131 ACM-113519	The issue happens when an MAEDC is configured to "REMOVE its previously collected entitlements if no entitlements are collected for an application" AND the data processing step(s) was interrupted by a Circuit Breaker AND some of the applications were missing in the collection run.

## Database Management

Issue	Description
SF-02279074 ACM-113303	Database collection is failing with Class Cast Exception during data re-encryption. It is expecting String data type for attribute ADDITIONAL_CONFIG but actual data type is CLOB as per definition in oracle.

## Password Management

Issue	Description
SF-02301005 ACM-113335	In Password capture tool, input parameters like User,Password values with XML special characters for Synchronize password ChangeRequest are supported now.

## Reports

Issue	Description
SF-02330097 ACM-114128	Customer observed that report can no longer be exported in .xlsx format. Export works okay in other formats e.g. csv/pdf/html/xml etc.  But when customer tries to export it in .xlsx format, it generates a 0KB report which fails to open in Excel.

## Reviews

Issue	Description
SF-02300054 ACM-113211	Set current filter as default for all users" is not working on users having a filter set.

## Role Management

Issue	Description
SF-02330968 ACM-113795	There are records in t_av_role_missingents for roles that have been deleted long ago. Seems these should be deleted or purged at some point. Some records still there for well over a year.
SF-02318447 ACM-113537  SF-01834062 ACM-112834	When users have the access to same Technical Role/Global Role from multiple Business Roles, removing the TR/GR from one of the BR results in removing the TR/GR from the users though the users still have the TR/GR access from the other BR's.
SF-02311233 ACM-113424	The customer tries to copy an existing role with one member and 3 ents the copied role <b>is not created with the member</b> , and when the customer makes apply changes for the new role, the <b>change request contains user changes to add ents to the user who is not in the role</b> , we checked the user access and the <b>ents existed as indirect but with no ents path</b> .

## Security

Issue	Description
SF-02306343 ACM-113430	AFX is using Apache Tomcat. In vulnerability report we can see the vulnerability with default files, but it doesn't have a CVE, Recommendation or Threat level.  Removing Apache Tomcat Default Files and Directories which causing

	vulnerabilities.
SF-01820065 ACM-111857	In vulnerability report we can see the vulnerability with default files, but it doesn't have a CVE, Recommendation or Threat level.

### Server Core

Issue	Description
SF-02314932 ACM-113322	Customer having large volume of data causes the purge job hung while deleting AFX related data. Changes made to batch delete data and also handled errors.

### UI

Issue	Description
SF-02323904 ACM-114030	This issue occurs when left panel (Guidance panel) does not exist on the page. Issue exists on all browsers except IE. We are calculating the review item table width by subtracting the guidance panel width from actual window width. But when guidance panel does not exist on page, it still tries to fetch the width of guidance panel section and failing while subtracting it.
SF-02325621 ACM-113669	The customer needs to give a regularly privileged user access to the Admin > Diagnostics "Diagnostics and System Data" and "Log Artifacts" tabs. There appear to be Aveksa Privileges for the General and <b>possibly</b> the Logs tabs already but nothing for providing access to the other Admin > Diagnostics tabs.
SF-02194788 ACM-112306	Users tab is taking time to load.

## Platform Matrix

The latest application server and JDK version have been certified for this release.

	<b>RSA Identity Governance and Lifecycle Hardware Appliance</b>	<b>RSA Identity Governance and Lifecycle Software Bundle</b>	<b>Software Only (WebLogic or WebSphere)</b>	<b>Container</b>
<b>Application Server Version</b>				
WildFly 21.0.1 Included	Qualified	Qualified	n/a	Qualified
WebLogic 14.1.1.0	n/a	n/a	Qualified	n/a
WebSphere 9.0.5.12	n/a	n/a	Qualified	n/a
<b>JDK Version Certified</b>				
AdoptOpenJDK 1.8.0_332	Qualified	Qualified	n/a	n/a
Oracle JDK1.8.0_311 (WebLogic)	n/a	n/a	Qualified	n/a
IBM JDK 1.8.0_331 (WebSphere)	n/a	n/a	Qualified	n/a
AdoptOpenJDK 11	n/a	n/a	n/a	n/a
