

RSA® IDENTITY GOVERNANCE & LIFECYCLE

SECURIENCE ACCESS ANYWHERE IMPLEMENTATION BLUEPRINT

AT-A-GLANCE:

A mobile gateway which allows RSA IGL activities to be viewed and completed on a mobile application or other device

Why?

- Modernise and transform ways of working in IAM
- Accelerate productivity with fast reactive user experiences
- Provide instant notifications and escalations to key decision makers
- Improve security and reduce use of username/password authentication

What?

- Allow Approvals and Review items to be completed via a native mobile app
- Deliver notifications or escalations direct to device via push notifications
- Perform actions on secure devices with password-less authentication

How?

- Mobile Gateway agent integrates directly with RSA IGL
- Native Mobile App from the App Store provides a consistent end user experience from your IAM Solution
- Approval actions are sent through our secure mobile gateway

SUPPORTED VERSIONS*

This has been validated to work on:

- RSA IGL v7.0.2
- RSA IGL v7.1.x
- RSA IGL v7.2.x

**Please always check and confirm, as this solution may have been updated since this was created*

OVERVIEW:

The Securience Access Anywhere solution is a mobile gateway which allows regular IAM activities such as Line Manager Approvals or User Access Review Maintains/Revokes to be communicated and completed from outside of the local network.

The native mobile application will receive notifications of this request almost instantly and the action is pushed back securely through the mobile gateway.

The solution integrates with RSA IGL using a local or remote agent, which then polls actions from the cloud-based gateway using regular TCP/IP over HTTPS.

KEY FEATURES & BENEFITS:

Security Outside of your Domain

- A registered secure mobile device allows biometrics such as a fingerprint or face-id to replace user password login
- Device/user-id stored encrypted and securely in the mobile device enclave
- Geo-located safe zones allow approved locations to be whitelisted to perform higher privileged actions
- IAM agents are registered to the secure multi-tenanted cloud gateway including IP whitelisting and client access tokens
- No sensitive customer or business information is transmitted or stored on our cloud gateway

Modern Mobile Experience

- Native gesture driven UI makes approvals or review item actions fast and easy to perform
- Step up authentication is non-intrusive with native mobile device biometrics quick to perform

Act Anywhere/Anytime

- No more waiting for people to be at their desks to approve requests. This can be done from the palms of their hands during meetings, at lunch or working from home without the need for a VPN connection
- Performance and load of the RSA IGL server will have zero impact on the mobile client so actions can be completed any time of the day and the experience will be fast, reactive and consistent
