

RSA[®] MFA Agent for Microsoft Windows

Release Notes

July 2022

This document describes the RSA[®] MFA Agent 2.1.3 for Microsoft Windows release. It also includes workarounds for known issues. Read this document before installing the software. This document contains the following sections:

- [Product Overview](#)
- [What's New in This Release](#)
- [Installing This Product](#)
- [Package Contents](#)
- [Documentation and Application Help](#)
- [Fixed Issues](#)
- [Known Issues](#)
- [Support and Service](#)

These *Release Notes* may be updated. The most current version can be found on RSA Link on the [RSA MFA Agent for Microsoft Windows Documentation page](#).

Product Overview

RSA MFA Agent for Microsoft Windows works with the Cloud Authentication Service to help secure sign-in to users' Windows computers. The MFA Agent is installed on Windows computers. You can configure the MFA Agent to challenge users either with or without passwords.

Passwordless Authentication

Domain users can sign in to their computers without using a password. The MFA Agent uses Active Directory certificates to secure passwordless authentication. Users need a registered FIDO2 security key and an Active Directory password for the first authentication. Subsequent authentications require only a registered FIDO2 security key. The MFA Agent creates a Microsoft Virtual Smart Card and enrolls it with a sign-in certificate to achieve passwordless authentication. Users can also perform additional authentication when accessing Windows computers and User Account Control.

Note: Users can also use RSA MFA Agent Test Authentication tool to enable passwordless authentication.

Password Authentication

Users can sign in to their computers with Windows password and additional authentication. A user enters the username and password and then can be prompted for additional authentication, for example, by approving a request in the RSA SecurID Authenticate app.

MFA Agent-Server Communication

When users try to sign into or unlock their Windows computers, the MFA Agent communicates with either Cloud Authentication Service or RSA Authentication Manager 8.5 to manage authentication.

The MFA Agent can connect directly to the Cloud Authentication Service or Authentication Manager, from v8.5 onwards.

Authentication Manager can act as a secure proxy server that sends authentication requests to the Cloud Authentication Service.

Note: The MFA Agent does not support passwordless authentication when it connects to Authentication Manager or when Authentication Manager acts as a proxy server to the Cloud Authentication Service.

RSA MFA Agent for Microsoft Windows is different from the RSA Authentication Agent for Microsoft Windows. For more information on the differences, see the *Installation and Administration Guide*.

What's New in This Release

This section lists the new features and enhancements that are introduced in RSA MFA Agent for Microsoft Windows.

Version 2.1.3 (Qualification), July 2022

- Version 2.1.3, released in February 2022, has now been tested/qualified to support computers that are members of a Workgroup as well as members of a Domain.

Version 2.1.3, February 2022

RSA MFA Agent 2.1.3 includes the following key features:

- Microsoft Windows 11 support
- Support for computers that are members of a Workgroup, as well as members of a Domain
- Easy upgrade from versions 1.2.1, 2.0.1, 2.0.2, 2.0.3, 2.1, and 2.1.1

Version 2.1.1, June 2021

RSA MFA Agent 2.1.1 includes the following key features:

- Users can sign in online and offline using SID700 hardware token (managed in Cloud Authentication Service) by selecting RSA SecurID Token authentication method.
- Easy upgrade from versions 1.2.1, 2.0.1, 2.0.2, 2.0.3, and 2.1.

Version 2.1, April 2021

RSA MFA Agent 2.1 includes the following key features:

- Users can sign in to their computers without using a password. This update to the Agent enables passwordless authentication to Windows 10 laptops and desktops using a FIDO2 security key with a USB connector for both online and offline authentication. For more information, see this [blog](#).
- Easy upgrade from versions 1.2, 1.2.1, 2.0.1, and 2.0.2.

Installing This Product

You can install RSA MFA Agent on a new machine or upgrade directly to RSA MFA Agent from any of the following versions:

- RSA MFA Agent 1.2.1
- RSA MFA Agent 2.0.1
- RSA MFA Agent 2.0.2

- RSA MFA Agent 2.0.3
- RSA MFA Agent 2.1
- RSA MFA Agent 2.1.1
- RSA MFA Agent 2.1.3

You can also install the RSA Authentication Agent 7.4.5 for Microsoft Windows and RSA MFA Agent 2.1.3 for Microsoft Windows on the same computer. You can migrate GPO policy settings from RSA Authentication Agent 7.4.0 to 7.4.5 for Microsoft Windows to MFA Agent 2.1.3.

For installation and upgrade instructions, see Chapter 3, "Installing RSA MFA Agent" in the *Installation and Administration Guide*.

Package Contents

RSA MFA Agent is available on the [RSA MFA Agent for Microsoft Windows Downloads page](#).

The RSA MFA Agent package contains the following:

- **RSA_MFA_Agent_2.1.3_PolicyTemplates.zip**
- **RSA_MFA_Agent_2.1.3.zip**
- **RSA_MFA_Agent_Reserve_Password_Hash_Generator_1.2.zip**

The following table describes each file.

File	Description
RSA_MFA_Agent_2.1.3_PolicyTemplates.zip	<p>Contains the Group Policy Object (GPO) administrative templates for managing authentication settings.</p> <p>The template files are automatically installed as part of local installation. Only use the zip file if you delete the files and need to re-install them on a computer.</p> <p>Contains the Migration Tool utility to automate the process of migrating your GPO settings from RSA Authentication Agent 7.4.0 to 7.4.5 for Microsoft Windows to MFA Agent 2.1.3.</p>
RSA_MFA_Agent_2.1.3.zip	<p>Contains the following folders:</p> <ul style="list-style-type: none"> • x86 and x64: The Windows Installer Packages for local installation of RSA MFA Agent on 32-bit and 64-bit computers. • Licenses: Contains the RSA License Agreement.
RSA_MFA_Agent_Reserve_Password_Hash_Generator_1.2.zip	<p>x86 and x64: The Windows Installer Packages for local installation of the RSA MFA Agent Reserve Password Hash Generator utility on 32-bit and 64-bit computers.</p>

Documentation and Application Help

The following product documentation is available on RSA Link on the [RSA MFA Agent for Microsoft Windows Documentation page](#).

Documentation

Title	Filename
<i>RSA MFA Agent 2.1.3 for Microsoft Windows Installation and Administration Guide</i>	rsa_mfa_agent_windows_2.1.3_installation_administration_guide.pdf
<i>RSA MFA Agent 2.1.3 for Microsoft Windows Group Policy Object Template Guide</i>	rsa_mfa_agent_windows_2.1.3_gpo_template_guide.pdf
<i>Test Authentication with MFA Agent for Microsoft Windows</i>	Test_Authentication_with_MFA_Agent_for_Windows.pdf
SecurID User Help	Available from within the SecurID Authenticate app

Fixed Issues

RSA MFA Agent 2.1.3, February 2022

This release includes fixes for the following issues:

AAWIN-6109. Added the system local time to the trace logs. UTC time was already used in the logs.

AAWIN-6090. Resolved an issue in which the Windows calendar configuration prevented offline data downloads.

AAWIN-6066. The Agent was not able to retrieve certain user attributes (alternate usernames) in some multi-forest environments, which caused authentication to fail. This has been fixed.

AAWIN-6054. In some cases, passwordless authentication provisioning required Azure to be available. This issue has been resolved.

AAWIN-6048. The Agent was not able to retrieve certain user attributes (such as the SID and alternate usernames) in some environments, which caused authentication (both online and offline) to fail. This has been fixed.

AAWIN-5964. Added a Windows Event Viewer entry for users who are not in a challenge group and who did not require additional authentication.

AAWIN-5323. The RSA MFA Agent no longer excludes the RSA Windows Agent's Credential Provider when the 'Exclude Third-Party Credential Providers' policy is enabled.

RSA MFA Agent 2.1.1, June 2021

This release includes fix for the following issue:

AAWIN-6000. Resolved an issue with authenticating an RDP logon for a user in a remote trusted forest.

RSA MFA Agent 2.1, April 2021

This release includes fixes for the following issues:

AAWIN-5678. Resolved offline authentication issues on the German version of Microsoft Windows.

AAWIN-5525. Resolved issues with the RSA Notification icon on Windows 10 systems.

AAWIN-5360. Trace logging partially captured credentials before they were submitted for authentication.

AAWIN-5215. Resolved an issue sending a username in UPN format to RSA Authentication Manager.

AAWIN-5184. The MFA Agent no longer installs the PowerShell script MFAAuthProviderACLSettings.ps1.

AAWIN-4612. In some customer environments, after the laptop on which the MFA Agent was installed woke from sleep, the MFA Agent authenticated offline.

Known Issues

This section describes known issues and workarounds.

MFA Agent slow to process authentication requests on Windows 8.1 when Windows location service is disabled but Agent is collecting system attributes

Tracking Number: NGX-31029

Problem: If you disable Windows location service on a Windows 8.1 computer and you have enabled or not configured the GPO setting **Collect system attributes for Cloud Authentication Service access policy**, the MFA Agent is slow to process authentication requests during sign-in.

Workaround: If you disable Windows location service on a Windows 8.1 computer, disable the GPO setting **Collect system attributes for Cloud Authentication Service access policy**.

Support and Service

You can access community and support information on RSA Link at <https://community.rsa.com>. RSA Link contains a knowledgebase that answers common questions and provides solutions to known problems, product documentation, community discussions, and case management.

The RSA Ready Partner Program website at <https://community.securid.com/t5/securid-integrations/tkb-p/securid-access-integrations> provides information about third-party hardware and software products that have been certified to work with RSA products. The website includes Implementation Guides with step-by-step instructions and other information on how RSA products work with third-party products.
