SecurID Software Token Quick Start Guide

The SecurID software token and the SecurID app help you to safely sign in to your company accounts using a PIN (something you know) and a tokencode (something you have). Follow these three steps to install and use your software token.

Step 1: Install the SecurID App

1. On your phone, tap the Apple App Store or Google Play icon.

2. Search for **SecurID Token**, which looks like this:

3. Install the app.

Step 2: Import Your Software Token

1. Open the SecurID app.

2. Tap **Get Started** on the Welcome screen and follow the prompts.

    If you already imported a token, you can tap the **+** icon to import another one and scan the QR code with your phone camera. Or if your administrator sends you an email with a URL link, tap the link or copy the URL to a browser or into the app.
Your software token is now active. If you need to set a PIN, see Set a PIN for SecurID Software Token.

Step 3: Sign In to Company Accounts

Use your SecurID software token to sign in to your company accounts, VPN client, or application.

1. Open the SecurID app, then follow the steps that correspond to your app display.

2. If your app displays **Enter SecurID PIN**:

    a. Enter your PIN in the app. Tap **Submit** to see the passcode.

    b. In the VPN client or application window, enter the passcode, without spaces.

      c.   Click **OK**

If your app looks like this:
Enter the following in the VPN client or application window:

      a.   If you have a PIN, enter the PIN plus the tokencode from the app, without spaces.

         If you do not need a PIN, enter only the tokencode, without spaces.

      b.   Click **OK**.
